Position: Junior Construction Engineer / Constructability & Methods Engineer (all)

Responsibilities:

This role is essential to promote and optimize interface from engineering to procurement and construction activities with the aim to improve the design and the methods applied in order to reduce costs, risks and time. This role involves reviewing project plans, proposing construction methods, and ensuring that the project can be constructed as designed:

- Reviewing project execution plans, schedules and engineering/design documents to ensure they are feasible, efficient and in line with predefined requirements.
- Working with project construction management to develop construction strategy and ensure technical and financial aspects of the project are achievable.
- Supporting Construction Execution team with technical assistance/ support to achieve resolution of raised conflicts, problems or other unconformities.
- Ensuring the preparation of required project construction documentation for inquiry to Subcontractors, vendors and project execution.
- Contributing to Improvement of Company Construction standards, specifications, typical and procedures.
- Coordinating activities and resources needed for efficient execution of work.
- Conducting constructability studies and reviews to identify potential issues before they arise together with other departments.
- Assisting with technical bid evaluation and lead technical meetings with Subcontractors and Vendors in compliance with plans and specifications.
- Leading technical review meetings and design review workshops, record and reports MoMs.
- Supporting internal development and improvement of Construction Standards and Procedure, with interface to Engineering and Procurement.

Requirements:

- Bachelor's degree in Construction Management, in Building Science, or a related field.
- With a strong interest in developing expertise in EPC (Engineering, Procurement & Construction) projects within the Oil & Gas sector. Motivated to contribute to emerging LNG and energy transition projects in Germany and internationally.
- Possesses a foundational understanding of project management tools and software, complemented by a proactive, analytical mindset and a solution oriented approach to challenges.
- Demonstrates a growing ability to communicate and coordinate effectively, with a positive attitude toward learning and collaborating in diverse, multidisciplinary teams.
- Open to secondment opportunities across Germany and abroad, with a flexible and collaborative attitude.
- Fluent in English and German, with excellent written and verbal communication abilities.
