Stellenbeschreibung

When travelers are searching for a hotel, we want the obvious choice to be trivago! Our leading metasearch engine is super fast and constantly optimized - enabling millions of travelers to compare hotel prices from hundreds of booking sites and find great deals in just a few clicks. We use cutting-edge technology, real-time auction, and machine learning techniques with petabytes of data to create an experience - time and money saved! In the lively city of Düsseldorf, we seize opportunities to learn everyday, innovate, and make an enduring mark on the travel industry. At trivago you will find those who aren't afraid of change but rather embrace it, turning every challenge into a pathway for growth. Join trivago, work with a great team, and grow with us!

Join us in making a difference

High quality visual content plays a crucial role in influencing travelers' hotel selection process, making imagery a key content in our metasearch product. Would you like to be the creative force behind the images that influence millions of travel decisions daily and ensure that our users can find their ideal hotel at the best price?

We're looking for a Student to join our team as a QA Engineer alongside passionate Software Engineers, QA Engineers and Product Owners, building, testing, and maintaining our image infrastructure.

How you'll make an impact:

- Perform comprehensive quality testing on our image processing pipelines
- Develop and execute test cases identifying issues with image quality, metadata accuracy, and processing performance
- Collaborate closely with engineers, product managers, and content specialists to report, troubleshoot, and resolve visual content issues
- Design, maintain, and improve our test automation infrastructure using various frameworks such as Karate, REST assured, and Postman
- Implement scripts for automation using Python, Java, or other programming languages to optimize testing processes and increase test coverage

- Assist in monitoring and analyzing metrics related to image performance through SQL queries and data analysis techniques, helping identify areas for improvement in our visual content database.
- Apply your API testing knowledge to validate endpoints that deliver and process visual content, ensuring data integrity throughout our image ecosystem

Anforderungsprofil & Qualifikationen

What you'll need to thrive:

- Excellent communication and organizational skills allowing you to prioritize effectively with internal and external stakeholders
- Fluency in English (verbally and written)
- Eager to learn, always striving for personal development
- Understanding of API testing
- Knowledge of writing SQL queries
- A good hands on experience with Python, Java or other programming language
- Understanding of test automation frameworks e.g. Karate, REST assured, Postman etc.
- Willingness to implement scripts for automation
- Previous experience or projects done related to databases or data analysis.

Worried about missing a few requirements? Still apply, and express your motivation as you may just be the right candidate for this or other roles!

What you can look forward to:

As you grow, so do we.

This is why at trivago, we prioritize your development, offer personalized coaching through Nilo, and free German language classes. You'll have access to workshops, educational meetups, conferences, free online learning courses, and a fully-equipped campus library. We also organize regular team and company-wide events so you can build experiences with us.

Life happens.

We offer paid vacation days during your employment, flexible working hours, 1 WFH day weekly, and the chance to work remotely for selected days abroad.

Enjoy your office days.

Use your daily canteen budget to share lunch with colleagues in our canteen, help yourself to complimentary snacks and drinks in our kitchens, stay healthy with our on-site gym and sports classes, and enjoy the comfort of ergonomic desks and focused work areas.
